

A new generation of Takeout Containers

Each year, millions of styrofoam containers end up in landfills after only one use. G.E.T. Enterprises' Eco-Takeouts™ series is a green alternative to disposable containers. Made of durable polypropylene, our reusable Eco-Takeouts™ containers can be sanitized in the dishwasher and reused again and again.

How does it work?

Users check out the containers, consume their food outside of the cafeteria, and then return the Eco-Takeouts™ to be washed and sanitized. Eco-Takeouts™ operate just like dishware used in the cafeteria. However, the design allows one to take food to-go! G.E.T. containers are better for the environment and they also cut supply costs through reuse.

Join the Eco-Takeouts™ movement!

A variety of choices

Eco-Takeouts™ are available in 6 sizes and styles. All are offered in translucent clear or jade. They are sold by the dozen and readily available for quick shipment. Eco-Takeouts™ can be customized to meet the needs of your cafeteria or food-service operation. We can put your company logo on the box, customize the color, and even adjust the size and shape.*

* Subject to minimum order and fees.

Eco-Takeouts™

- Cost-effective
